

WALLSILK

Unique Embossed Wallcoverings

This luxurious wallcovering with its very special coating ranges among the most precious wallcoverings on the market.

The base is a stable non woven substrate interspersed with long fibres which is treated to a special acrylic coating, dyed with pearlescent pigments. This unique surface, enhanced by an unparalleled embossing technique creates stunning wall effects.

Only natural oils, water-based pigments and eco-friendly lacquers are used for the surface coating. Organic pigments allow for lightfast colours of a certain transparency in a rich array of hues.

The product is lightfast, washable, water vapour permeable, dry strippable and fire resistant to EU Norm 2007 Din EN13501-1: C-s1, d0.

All materials used comply with the new REACH regulation.
